

Unidentified Building northeast of Orton Hall

Herrick Archives Number H 991

Photographs X 25009 and X 25010 show a two-story white frame building. The size is possibly 20' x 30', and the ridge runs east and west. There is a chimney through the north slope of the roof.

The pictures show the cane rush in fall of 1891, according to a notation on the originals. The fact that some trees are bare and some still have leaves supports the "fall" notation. Piles of dirt may be from the construction of Orton Hall (060), for which the construction contract was awarded on October 14, 1891, support the "1891" part of the notation.

This building is larger and probably farther east than H 995.

For indexing purposes, H 991 is listed at 130 South Oval Drive.
